

CREDITCOIN BUIDL FOR THE REAL WORLD / ATTESTCOIN

Business trust, *proven* *in settlement.*

Cross-chain supplier payments become reconciled invoices, durable counterparty history, and machine-readable policy on Creditcoin.

WORKING ON TWO TESTNETS

ATTESTCOIN NATIVE VERIFICATION

ATOMIC BATCH SETTLEMENT

NON-CUSTODIAL USDC

EVM-FIRST ROADMAP

A distributor can pay overseas suppliers in stablecoins, but matching those payments to invoices and reusing the history still depends on **private databases and manual trust**.

Split

Invoice terms and payment evidence live on different chains.

Private

A platform reconciles the payment inside its own database.

Manual

Finance teams reconcile transaction hashes against obligations.

Trapped

Payment history rarely becomes portable supplier trust.

WHY NOW

Stablecoin settlement scaled. Portable trust did not.

01

\$76B annualized B2B run rate

Characterized stablecoin B2B payments in August 2025, up 255% year over year.

02

\$274B stablecoin supply

Visa reports supply grew more than 50% during 2025 as institutional infrastructure matured.

03

Attestcoin makes the missing step possible

Creditcoin contracts can verify and use supported foreign-chain transactions without trusting one oracle operator.

THE TIMING

Payment rails became
programmable before business
trust became portable.

Sources: Artemis, Stablecoin Payments (Oct 2025);
Visa, Stablecoin Strategy (2026).

Commit. Pay. Prove. Settle. Remember.

The worker transports evidence. It does not decide who paid whom, how much was paid, or which invoice should settle. Compatible proofs can be submitted in batches of up to ten.

Remove the protocol and the trust model breaks.

WORKING PRODUCT

One workflow from obligation to reusable trust.

MA'AT

LIVE ON TWO TESTNETS

Business trust, *proven in settlement.*

Ma'at turns Ethereum payment behavior into verified, machine-usable trust on Creditcoin. No bridge. No centralized oracle. No custody.

ATTESCOIN-VERIFIED SOURCE TRANSACTION

CREDITCOIN 182631

VERIFIED PAYMENT

DYNAMIC TRUST

PAYMENT PROOF
8abb8d979f...de8f58e

NON-CUSTODIAL

VERIFIED CROSS-CHAIN DATA

ATOMIC TRUST UPDATE

OPEN CREDIT POLICY

POSITIONING / NO BRIDGE / NO CENTRALIZED ORACLE / NO CUSTODY

COMMIT

Dynamic invoice terms

```
buyer / vendor / amount / due date / metadata
```

PAY

Direct USDC settlement

Buyer pays vendor; Ma'at never takes custody

PROVE

Inspectable Attestcoin receipt

```
Source transaction / height / index / proof metadata
```

REMEMBER

Paid and received history

Lifetime view across current and legacy deployments

Batch the operation. Preserve the relationship.

TREASURY SCALE

2–10 payments. One shared continuity proof.
One atomic Creditcoin transaction.

ALL SETTLE CORRECTLY / OR THE COMPLETE BATCH REVERTS

LIVE BATCH

2 invoices settled

0x30e1b646 ... 6755c6b56

EXACT CONTROLS

Per-invoice validation

payer / vendor / amount / timestamp / success

AUDIT CONTINUITY

No disappearing history

Legacy records resolve read-only after upgrades

WALLET TRUTH

Paid $\neq$ received

Buyer and vendor volume shown separately

BUSINESS OUTCOME

Reusable trade reference

Source-verified and tested end to end.

46

passing contract tests

21

passing worker tests

2-10

payments per atomic batch

2x

Live proof acceptance, exact reconciliation, trust updates, credit policy, and replay rejection are independently inspectable on public explorers.

Prove settlement. Expand rails. Finance trust.

NOW / SHIPPED

Ethereum ↔ Creditcoin invoices, batch proofs, durable history

NEXT / OPERATE

Durable queues, monitoring, treasury approvals, pilots

ADD / CONTROL

Partial payments, refunds, disputes, KYB and documents

EXPAND / EVM

Ethereum mainnet, then Attestcoin-supported EVM chains

FINANCE / API

Supplier finance, treasury SDK, configurable policy modules

EVALUATE / LATER

Non-EVM chains only after official protocol support

Current support is Ethereum-based. Additional chains are roadmap intent, gated by Attestcoin support and complete adapter, decoder, wallet, and security validation. No unsupported chain is claimed today.

SOLO FOUNDER

Built across contracts, proof infrastructure, cloud, and product.

Doize

Solo Founder & Software Engineer

Experience building across AI, blockchain security, and robotics.

GITHUB / @DOZIE2001
LINKEDIN / CHIDOZIE DAVID

Ma'at's end-to-end scope includes Solidity, Attestcoin receipt decoding, TypeScript automation, resilient RPC operations, and a responsive React application.

THE ASK

Hackathon recognition, CEIP fast-track consideration, Creditcoin ecosystem support, and B2B pilot partners for the next production milestone.

Ethereum moved the money.
Attestcoin proved the payment.
Creditcoin turned that proof into reusable business trust.
